

Nottingham University Hospitals NHS Trust set to install multiple decarbonisation measures thanks to £25m government energy fund

The Public Sector Decarbonisation Scheme, which is administered by Salix Finance on behalf of the Department for Business Energy and Industrial Strategy (BEIS), provides funding to public sector organisations and assists them in playing their part to reduce carbon emissions and tackle climate change.

NUH received £24.7m from the scheme to install multiple decarbonisation measures across their estate, including the replacement of previously used gas and coal fired boilers that provided heating and energy for the City Hospital.

The Trust will also undergo the demolition of the old laundry building at the heart of the City Hospital Site, opening the area up for future redevelopment, whilst construction begins for a new energy centre equipped with power units to provide heating and electricity for the hospital.

Combined, the measures will save the Trust £1.8m a year, significantly improving the hospital environment for patients and staff. In addition, NUH is set to receive Government funding as part of the Health Infrastructure Plan (HIP) which will deliver 40 new hospitals by 2030.

Estimated savings achieved by Nottingham University Hospitals NHS Trust

Annual financial savings:
£1.8m

Total grant value:
£24.7m

Annual carbon savings:
6645 tCO₂e
